“Build it Better” is more than a mantra. It is a lifestyle that is based on attitude, mindset, and discipline. You embrace it because you are determined to be better today than you were yesterday. You steadfastly pursue your passions and are humble in your pursuits. You are willing to hold yourself to a higher standard and tenaciously push forward with unwavering persistence.

You recognize that “handcrafted” doesn’t always mean “well-crafted,” and that “Made in the USA” doesn’t always equate to quality. You deserve firearms that are designed and engineered to the highest standards using only the best possible materials and technologies.

The word standard is not in your vocabulary. You never settle, and neither do we.
We manufacture every firearm and accessory using only the highest quality materials and production methods, ranging from time-honored hand tooling techniques to custom in-house CNC and EDM precision-built technology. Every gun we build is assembled from start to finish by a single technician who also test fires each gun before it’s ready to ship. All of our firearms include a certificate of authenticity signed by the technician who assembled your gun. Each product is a promise – and we take that very seriously.
THE EVOLUTION OF THE WORLD’S MOST ACCURATE RIMFIRE RIFLE

It has always been our goal to achieve bolt-action accuracy from a semi-auto, and this begins with the barrel. Our stainless steel barrels feature match bore and chamber tolerances. These dimensions are proprietary to Volquartsen and have evolved from over 25 years of testing. Digital gauging equipment ensures that each barrel meets our stringent criteria.

Starting January 1, 2020, all Volquartsen Firearm barrels will undergo a unique laser hardening process. This will provide all the benefits of a hardened breech without compromising the barrel quality.
STAINLESS STEEL MODELS: IF-5, SF-1, DELUXE, AND CLASSIC RIFLES

We offer four configurations of our stainless steel barrel, and all are very similar in terms of accuracy and performance. Each barrel features match tolerances in both the bores and chambers and are measured using the latest digital gauging equipment. All of our barrels are stress relieved multiple times throughout the manufacturing process. Once the rifling, chambering, and machine work are complete, our barrels undergo a machine honing and lapping treatment that not only helps in keeping the barrel clean, but also eliminates the need for a tedious break-in.

Which Stainless Steel Barrel is right for you?

There is no wrong decision and it is entirely dependent upon individual shooting preferences. For example, are you shooting from a bench, prone, or off-hand position? Some shooters prefer the weight of a non-fluted barrel, where others prefer the balance of a lighter barrel, such as the I-Fluted model.
**IF-5**

The total package every shooter is looking for. The IF-5 is perfectly balanced and incredibly accurate, largely due to our signature I-fluted barrel. It reduces weight and creates more surface area than any other fluting designs, eliminating approximately 12 oz. of overall rifle weight.

Complete specification charts can be found starting on page 20.

**SF-1**

One of our most unique rifles, the SF-1 features our signature snake fluting design. This enables more heat dissipation than conventional straight flutes, but added rigidity over spiral flutes. The increased surface area helps cool the barrel during long, rapid-fire strings. Snake fluting reduces barrel weight by approximately 5 oz.

Complete specification charts can be found starting on page 20.
DELUXE

The Deluxe model features a straight fluted stainless steel barrel and removable 32-hole compensator. This signature design gets you back on your second shot quicker, reduces weight, and helps dissipate heat for incredibly accurate shots, every time.

Complete specification charts can be found starting on page 20.

CLASSIC

The Classic is the foundation of all our semi-auto rifles. Its sleek, clean features appeal to those seeking an updated take on the more traditional all-around rifle, yet looking for accuracy and performance.

Complete specification charts can be found starting on page 20.
Is the balance of a rifle more important than the weight?
For many shooters, a heavier rifle that balances well can be easier to shoot than a lighter rifle where all the weight is on the muzzle.

Our Lightweight and Superlite rifles are designed for the uncompromising shooter aiming for balance and accuracy. The Lightweight and Superlite models utilize our original Lightweight THM Tension Barrel. This design is the original “lightweight bull barrel” and the four-piece design consists of a small diameter barrel with stainless steel end caps separated by a carbon fiber sleeve. This design creates an air space between the barrel and sleeve, allowing for better heat dissipation than other lightweight barrel designs.

The only difference between the Lightweight and Superlite is the receiver - stainless steel receiver on the Lightweight versus the Type III hard anodized aluminum receiver on the Superlite, results in an approximate 8 oz. difference.

The Ultralite is our lightest rifle, originally designed specifically for rimfire steel shooters. It’s based on our carbon fiber tension barrel design but features a smaller barrel diameter resulting in our lightest configuration, making it perfect for transitions from plate to plate in a rimfire challenge event. It also features the Type III hard anodized aluminum receiver.

**LIGHTWEIGHT**

True to its name in stature only, this rifle is a heavy-duty performer ideal for plinking, hunting, and all-around shooting. Our signature lightweight match grade barrel with tensioned sleeve creates a rigid, accurate, lightweight barrel which offers all the accuracy of heavier barrels, without the weight.

Complete specification charts can be found starting on page 20.

**SUPERLITE**

Our Superlite is a breeze to carry and shoot. It is incredibly lightweight, but also extremely tough. Featuring our robust CNC-machined aluminum hard anodized receiver and our Lightweight THM tension barrel, the Superlite packs on the performance - just not the pounds.

Complete specification charts can be found starting on page 20.
ULTRALITE

The Ultralite is built on our aftermarket receiver. It is still CNC-machined; however, it uses a more conventional wedge-locking block to secure the barrel as opposed to a threaded receiver. The Picatinny rail on this model is also removable, allowing for the receiver to be drilled and tapped for a specific mount or red dot optic.

Complete specification charts can be found starting on page 20.
VM-22

The VM-22 combines our Superlite barreled action with the Magpul® X-22 Hunter stock, resulting in a performance match that’s made in heaven. This combination makes it an extremely accurate, well-balanced, and lightweight all-around rifle that’s comfortable to shoot off-hand or from a benchrest.

Complete specification charts can be found starting on page 20.

OPEN-SIGHT

We’ve taken the popular Hi-Viz® fiber optic front sight and paired it with an XS Sights® adjustable rear ghost ring, making it the perfect combination for any lighting conditions. This set-up provides quick acquisition for rimfire steel competitors, as well as pinpoint accuracy for target shooters and hunters.

Complete specification charts can be found starting on page 20.

THE ART OF SHOOTING

KATIE PAVLICH

The 2nd Amendment maven, Fox News contributor, and best-selling author on protecting and preserving the art of shooting.
“As we continue to advance in our own relationship with the sport, we have an obligation to share it. The American shooting tradition is one that must be protected...”

The art of shooting is a thrilling and individual one. Performance requires focus, patience, and the management of a tool being used to accomplish a downrange goal. Improvement takes discipline, perseverance, and dedication. The contour and weight of a handgun feels different for everyone. The stock of a rifle or shotgun is unique for each shoulder. And when you pull the trigger, whether standing, kneeling, or prone, you are in charge.

But while shooting as a sport ultimately comes down to personal skill and an individual relationship with a firearm, sharing this pastime and the constitutional right to keep and bear arms with friends or new shooters is tremendously rewarding. This is especially true given the sport naturally exudes curiosity.

I often get requests to “go shooting” from people who are unfamiliar with the sport. Those who show up for the first time are often optimistically cautious and tepid, but leave educated and empowered. They want to come back, work on their new skill set and ultimately pass their experience onto others.

The survival of the Second Amendment can be credited to those dedicated to its tradition. It has been proudly shared in a parallel way with peers and passed down for generations. Whether it’s Olympians representing the United States on the global stage, shooters competing in local matches, fathers proudly passing down their rifles to sons and daughters, mothers arming themselves to protect their families, grandparents buying firearms for holidays and birthdays, or friends taking curious observers to shoot for the first time. Memories at the range and the time spent are priceless, and we all wish we had more of both.

Every August, shooters from around the country officially celebrate National Shooting Sports Month. Over the course of 31 days, the experienced and inexperienced are encouraged to get out to the range and to bring a friend or someone new. Whether it’s outside or inside, long- or short-range target practice, the occasion is a reviving practice that encourages us to work on our shooting goals.

As we continue to advance in our own relationship with the sport, we have an obligation to share it. The American shooting tradition is one that must be protected and passed on to others, who will eventually feel the need to do the same.
The Summit straight-pull bolt action is based on a concept originally developed by PWS – the Summit T3. The Volquartsen Summit represents the combination of their innovative design, our 40+ years’ rimfire experience, and our mindset to “Build it Better.”

Designed for both competition shooting as well as small game hunting, this unique rifle is a straight-pull bolt action inspired by the 10/22 style platform. The CNC-machined receiver features an integral 20 MOA Picatinny Rail, making it the perfect rifle for any rimfire long-range shooting.

The Summit is available with either a stainless steel or aluminum action-lightweight or stainless steel bull barrel – easily configurable for any shooter. Barrels feature ½ x 28 muzzle threads, making it the perfect companion for your favorite suppressor.

This innovative design is built for everyone from the junior just getting into shooting to the accomplished competitor.

Available in multiple calibers and configurations with more to come!
SUMMIT

All Summit models feature an integral 20 MOA Picatinny rail, TGS Trigger Group with a 1.75 lb. trigger pull. The action is available as a stand-alone product for 22 LR or 17 Mach 2 builds in your choice of stainless steel or Type III hard anodized aluminum. The 17 WSM is available only as a complete rifle with a stainless steel action. All barrels are suppressor-ready and threaded 1/2 x 28, with the exception of the tapered barrel. Summit models utilize a locking block system to secure the barrel to the receiver.

NEW FOR 2020
The Scorpion 22 LR is the product of over 40 years of continual innovation, engineering, and vision. It offers unbeatable accuracy and balance and is extremely lightweight, with models weighing under 2 lb. Our proprietary, signature crisp 2.25 lb. trigger pull provides uncompromising quality. With the Scorpion, you can pick your poison – with different configurations for your frame, grip, barrel, and accessories to build your own customized set-up.
SCORPION 22 LR FEATURES:

- CNC-machined stainless steel barrel
- Stainless steel breech
- Type III hard anodized aluminum uppers
- Competition bolt standard
- Choose a 1911 style or Target style frame
- 4.5” or 6” upper
- Muzzle threaded 1/2 x 28
- Choose from Multi-port compensator, Single-port compensator, or a thread protector
- Integral Picatinny rail
- Configure your own at Volquartsen.com

Competition ready in an easy takedown configuration - the Black Mamba is everything you are looking for and more whether you are a backyard plinker, looking to win your local matches, or hitting the national competition scene.

The Black Mamba combines features from our Scorpion 22 LR pistol along with the push-button takedown functionality of the Ruger® MK IV™ platform.

The Black Mamba build utilizes a Ruger® MK IV™ frame that has been retrofitted with our Accurizing Kit providing a crisp, clean 2.25 lb. trigger pull. The frame has also been fitted with our magazine release that, when used in conjunction with our magazine base pads (included standard), eliminates feeding issues. This is accomplished by raising the magazine's position in the frame, allowing the bolt to more positively engage each round as it feeds.
BLACK MAMBA 22 LR FEATURES:

- CNC-machined stainless steel barrel with stainless steel breech
- Type III hard anodized aluminum uppers
- Our Accurizing Kit for a 2.25 lb. trigger pull
- Competition Bolt with DLC coating standard
- Choose a Ruger® MK IV™ 22/45™ or Ruger® MK IV™ Target style frame
- Integral Picatinny rail
- Muzzle threaded 1/2 x 28
- Single-port compensator
- Models in 4.5” or 6” barrel lengths
- Custom configurations available – build your own at Volquartsen.com
**Black Mamba**
- 4.5” or 6” black aluminum upper

- Compatible with most red-dot sights
- Open bottom design will work with thin suppressors (1” diameter or smaller)
- Keep your Black Mamba safe and secure
- Made in the USA
SPENDING TIME AT THE RANGE

SCOTT VOLQUARTSEN

The President of Volquartsen Firearms discusses the importance of spending time at the range and having fun while you’re there.
"For many of us, the range is a form of therapy, an escape from the office, or simply a break from the daily grind. It's the one place that you can leave all the daily stressors behind."

Do you remember your first shooting experience? Was it as a young kid with a parent, grandparent, or an older sibling? Or maybe you have just recently been introduced to shooting?

Either way, I'm betting you can recall that first time with a firearm. There's something unique, something memorable about that first shot going downrange. Don't believe me? Watch a new shooter’s reaction - it’s usually all smiles followed by something like, “I want to do that again!”

For many of us, the range is a form of therapy, an escape from the office, or simply a break from the daily grind. It’s the one place that you can leave all the daily stressors behind and be fully present in what you are doing. Whether it be with family, friends, or by yourself - putting rounds downrange is therapeutic.

I feel fortunate to have what I consider one of the best jobs in the world, but over the years, it was hard to distinguish between fun range time and work range time. Range time was testing new products, troubleshooting existing ones, or simply test firing completed firearms. Being on the range is something I started to take for granted and not fully appreciate.

If you're a competitive shooter, maybe work on the range for you looks like repeating drills or stages trying to improve those times. Maybe your focus is more tactical or EDC, and the range has become all about situations and scenarios.

Let me be clear, I don't want to take anything away from putting in work and honing your firearm skills at the range. My point is, it’s ok to take a step back and shoot for the pure enjoyment of shooting.

This past year I told myself I need to set aside more “fun” range time versus “work” range time. It’s always easy to say, “I don’t have time,” but many times that is an excuse we tell ourselves. I get it, it seems everybody is busier than ever between work, kids’ activities, chores around the house, and everything in between. I would argue that in our busy lives it’s even more important to prioritize time to get away and decompress.

I consider myself fortunate that I get to spend time on the range with people from all walks of life. It could be world champion shooters one weekend and busy CEOs the next. It’s always a privilege watching competitive shooters showcase their ability on the range but there’s almost something sacred about watching what the range can do for so many of us. The more shooters I visit with on the range the more I have come to realize there’s always a common theme - the word “reset.”

Spending time on the range with like-minded individuals, shooting for nothing more than fun, can be what we all need. The perfect reset.
THE FINEST UPGRADES FOR YOUR GUN
OUR COMPLETE LINE OF PARTS CAN BE FOUND AT VOLQUARTSEN.COM
Stainless Steel Match .920” bull barrels

Lightweight Barrels for Ruger® 10/22® and 10/22 Takedown®

SUPERIOR FUNCTION & OPTIMAL ACCURACY

Our drop-in .920” bull barrels set the standard in accuracy and performance for rimfire barrels. Each barrel is digitally measured and inspected. We’ve developed our unique chamber to provide optimal accuracy but also superior function. Several fluting options are available.

Our lightweight barrels are no exception. The THM tension barrel consists of a special taper honed match barrel and chamber. It features a sleeve that is used to create tension on the barrel itself. This unique design eliminates issues typically found in smaller barrel profiles.

Our complete line of barrels can be found at volquartsen.com.
Carbon fiber lightweight barrel and I-Fluted barrel with compensator for the SW22 Victory®

LLV Competition Uppers for the Ruger® MKII™, MKIII™, and MK IV™

**BALANCE, VERSATILITY, ACCURACY**

Designed to withstand years of use, whether you’re a serious hobbyist or a competition shooter. Our uppers feature a stainless steel breech and are precision-machined from a single piece of aluminum billet. An integral Picatinny rail is machined into the top of the upper. A contoured barrel reduces weight without sacrificing accuracy.

Our barrels feature easy, drop-in installation and reduce weight while increasing accuracy. We can help you choose the correct one for your application.

Our complete line of barrels and uppers can be found at volquartsen.com.
The TG2000 is the drop-in replacement trigger guard that sets the standard for the Ruger® 10/22® rifle. It is machined from aluminum billet, and with precision wire-EDM cut internal components provides a crisp, clean 2.25 lb. trigger pull. Pretravel and overtravel adjustments can be set to your preference. The trigger is reset internally to eliminate any dragging or inconsistencies caused by a conventional trigger plunger.

Complete CNC-machined pistol frames with our Accurizing Kit pre-installed are also available. These frames feature a 2.25 lb. trigger pull.
Lightweight Thumbhole Stocks
Feature a high Monte Carlo comb and thumbhole to provide for upright head and hand positioning.

Thumbhole Silhouette Stocks
Feature a high Monte Carlo comb and thumbhole to provide for upright head and hand positioning.

Sporter Stocks
Feature a rollover cheekpiece and curved teardrop grip with a wide forend.

AS-1 Ambi Stock
The most versatile stock we offer. Designed to fit our semi-auto 22 LR rifles, as well as our Summit action, and all Ruger® 10/22® rifles. Available in gray, brown, or brown/gray only.

Volthane Grips
Added comfort and control. These grips have been a staple for nearly 30 years.

Ruger® MK III™ & MK IV™ Grips
Feature thumb rest, heel rest, and finger grooves. Designed to provide a relaxed, steadier hold.

Inferno Stock - Fully Adjustable - Ambidextrous
The Volquartsen Inferno Stock is a fully adjustable stock that is completely CNC machined from an aluminum billet. This is like no other stock on the market.

All laminated wood stocks & grips available in these colors

Green  Blue  Gray
Brown  Red  Brown/Gray

Stock weights can be found with rifle specs beginning on page 20.
**ACCURIZING KITS / RUGER®**

**Competition Bolt for Ruger® 10/22®**

**32-Hole and Forward Blow Compensators**

3 oz. weight

**Replacement Receiver for Ruger® 10/22®**

**Competition Bolts for the Ruger® MK II™, MK III™ or MK IV™**
Eliminate stovepipes, failures to fire, and improve overall performance. Features an Exact Edge Extractor as well as the SureStrike Firing Pin. Diamond Like Carbon (DLC) Coated.

**Accurizing Kit for the Ruger® MK IV™**
(also available for MKII™ & MKIII™)
Complete drop-in kit includes Target Hammer, Target Sear, Target Trigger, Extended Bolt Release, and Trigger Return Spring with Polished Plunger. All the internal components needed for the crisp, clean 2.25 lb. trigger pull. No stoning or fitting required.

**COMPETITION GRADE**

Did you know our Competition Bolt for the Ruger® 10/22® was the first aftermarket bolt available for the 10/22®? It eliminated the need to rework the factory bolt. No more having to square the bolt face, reduce the headspace, or replace the internal parts on the factory bolt. The DLC coating has been tested through the rigors of competition and has proven itself time and time again. You get improved cycling, less lubrication, and very minimal cleaning. Just wipe it down, and you’re good to go.
THANK YOU

Here's to our shooters, hunters, competitors, dealers, ranchers, fathers, mothers, sons, daughters, plinkers, teachers, enthusiasts, supporters, collaborators, champions—and everyone in between. We're honored to see our work bring people together, and we couldn't be more grateful for your continued enthusiasm and support. — The Volquartsen Family
